

## SUSTAINABILITY FUTURE GROWTH

Industry leaders providing expertise and training in security management systems and security risk management.

## Lead Auditor Security Management Systems (ISO 28000)

# Lead Auditor Security Management Systems (ISO 28000)

## Course Overview

This five day course provides international recognition for personnel who are directly involved with the implementation, maintenance, monitoring and improvement of Security Management Systems at all levels of management, to the RABQSA standard. It will benefit those who conduct audits to ensure organisations maintain security managements systems based on the identification and management of risks.

**This course is a pre-requisite for gaining certification as a RABQSA registered Security Management Systems Lead Auditor - visit [www.rabqsa.com/sb\\_sms](http://www.rabqsa.com/sb_sms)**

## Course Objectives

- Knowledge of a systematic and practical approach to security management system auditing and a broad understanding of the scope of security management system auditor responsibilities
- Competency in organising and directing audit team members
- Provide an overview of HB 167:2006 security risk management requirements
- Develop ability to effectively provide management with objective advice regarding progress towards compliance and certification of security management systems
- Demonstrable understanding of the intent and application of relevant Acts, Standards, Codes of Practice, and other documents relevant to State/Commonwealth legislation

## Who should attend?

This course is designed for personnel and contractors who wish to perform audits on security management systems and who have worked in security roles:

- Asset protection
- IT and electronic systems
- Personnel protection
- Loss prevention
- Emergency and incident response
- Transport and logistics

## Key Session Topics

- Plan, conduct, and report an actual audit and examine relevant case studies
- The role of the auditor, auditor attributes, and interpersonal skills
- Major elements and scope of risk management including definitions of common risk management terms
- Recognised management systems
- Structure and make-up of management system documentation
- General requirements for information security
- Roles and responsibilities for security management
- Requirements and methods for ensuring continuous improvement
- Audit techniques and methodology according to ISO 19011, ISO/PAS 28001, and AS 4360

## Assessment and recognition

On successful completion of this course, participants will be issued with a Certificate of Attainment covering the following competencies under the RABQSA International TPECS:

- RABQSA – AU Management Systems Auditing
- RABQSA – TL Leading Management Systems Audit Teams
- RABQSA – SCY Security Management Systems

This certificate enables successful candidates to apply to RABQSA International for certification as a provisional auditor. For further information on RABQSA certification process please go to [www.rabqsa.com](http://www.rabqsa.com).

Sustainability can also assist with the skills assessment requirement of your certification process. Sustainability is a Registered Training Organisation (RTO) 51587 ABN: 55 093 725 118

## Sustainability Pty Ltd

Sustainability Pty Ltd is a team of management consultants specialising in auditing, consulting, contracting, and training for risk management, security management, safety, and environmental management.

We have global experience in the development of integrated business solutions – from initial risk assessments to the integration of quality, safety, and environmental management systems for practical implementation. We have built our reputation in the rapidly developing resources and industrial sectors of Australia and Asia, especially Indonesia, China, Mongolia, Myanmar and Kazakhstan.

Our team of consultants, advisors, and trainers assist clients:

- to achieve current leading international practices
- to identify risks and establish risk management systems
- to deliver training and business process solutions
- to review, develop, and implement effective management systems in environmental, safety, security and risk mitigation

Our head office is in Perth, Western Australia, with international offices in Mongolia, Singapore, Pakistan and Indonesia. Our team of dedicated consultants has a proven track record working in different geographical locations, with most consultants certified by internationally-recognised institutions such as RABQSA International (USA/ Australia) and the American Society for Industrial Security (ASIS).

**Training available at your venue anywhere in the world. Please phone or email our office if you have any queries and to request registration information.**
